

Knowledge is power...

Supercharge your Sage 50, with Microsoft Power BI and make data driven decisions that drive your business forward

As the amount of data we store continues to grow, so does the need for business intelligence and analytic capabilities. The success of your company depends both on your ability to access information when you need it, but to gain insights into business performance. This enables you to make data driven decisions to drive your business forward.

BI TECH uses the intuitive analytical capabilities of Microsoft Power BI to bring your Sage 50 data to life through stunning visualisations that empower your teams to make solid, data-driven decisions.

Why Power BI?

Power BI is a cloud-based business analytics service that transforms your company's data into rich, informative visuals.

Live and real-time dashboards, interactive visual reports, mobile apps and more help transform big data into rich visuals, giving you a single view of your most critical business information.

Bring data to life with intuitive dashboards and interactive reports

Bring together financial reports

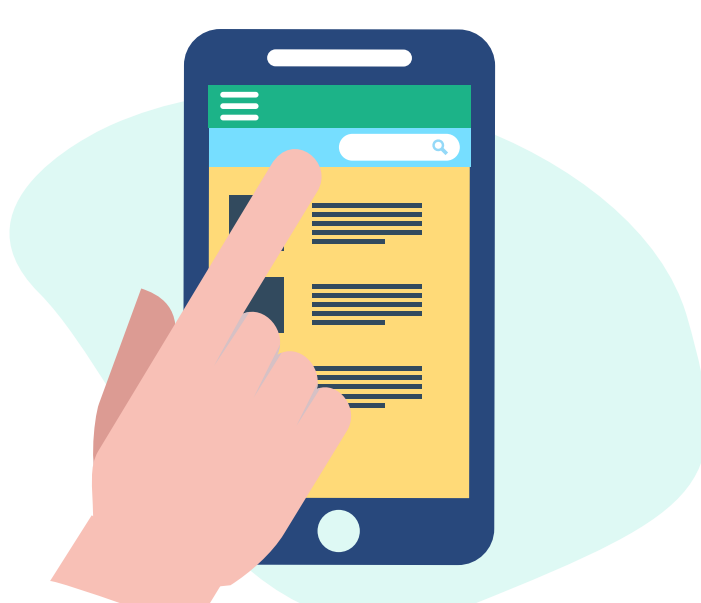

Analyse trends all in one place

Bring the power of big data to every employee

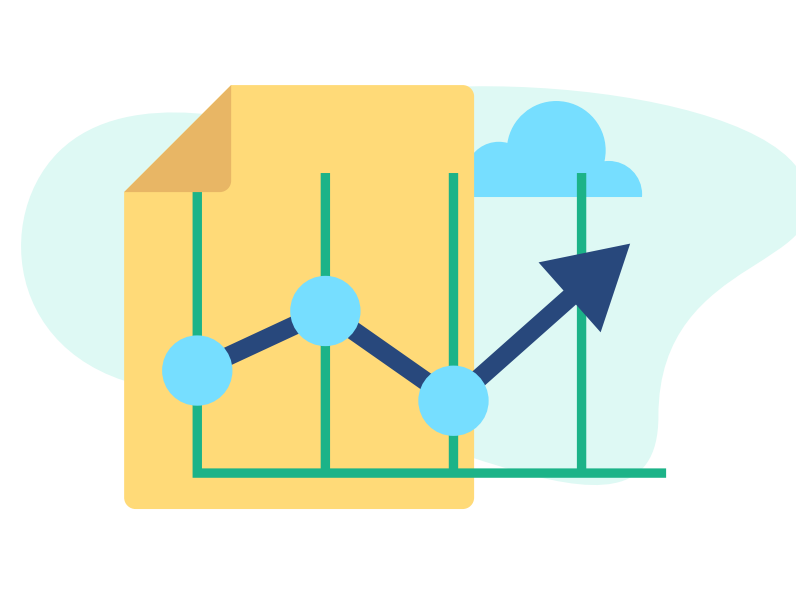

Create reports easily

Access your dashboards on mobile devices

Make data-driven decisions in real-time

Track Key Performance Indicators

Getting actionable data from Sage 50 can be challenging...

When you're awash with data it's easy to miss emerging trends or sudden changes. But, data and insight are vital for business success.

Get the best insights out of your Sage 50 data and make informed business decisions with a simple, holistic, real-time visual display of your Sage information.

See your performance at a glance

When you can see how your business is performing and what isn't working, you can start making intelligent, data-driven decisions to improve your business. That kind of insight has a direct impact on your bottom line. Here are some examples of the information you can access with Power BI:

Financials vs prior years

You can compare Net/ Gross Profits, Revenue and Purchases with previous years, giving you insight into your spending and earning.

Customer information.

View customer activity, sales and profit compared to prior years. This way, you know who your best customers are and who are more likely to respond to cross-selling or up-selling.

Expenses.

View customer activity, sales and profit compared to prior years. This way, you know who your best customers are and who are more likely to respond to cross-selling or up-selling.

Net new customers.

Find out how often you win new business to know if your offering is attractive. If you find a dip in this number, you can adapt your business plan accordingly.

About us

We specialise in client centric analytics solutions through Microsoft Power BI. A Microsoft Gold Partner, we're dedicated to using technology to drive innovation and positive change, empowering our customers to achieve more.

Our team of experienced BI consultants understands the unique needs of the SMB business and work to provide simple, effective visualisations that bring your data to life, supercharging your analysts and providing smarter insights.
